*How to access the page:*

- This is the Home Page of accesSPoint. The user will get to this page after they log in.

*Purpose of the page:*

- This page is the main page when a user logs into accesSPoint.

Page content:

- On the navigation bar from left to right, the logo, page title, all the icons that are existing in the body of the page, the home button, the flag, and the Sign Out button.

*Buttons, contextual links and other interactive features:*

- Make sure that all of the wireframes are linked though these interactions (e.g., clicking on a "Search" button should take one to the search results wireframe)

Navigation options:

- We have a global navigation bar. Includes the logo, page title that the user will be on, and the icons that users would see, which are the exact same ones from the body of the home page. The purpose of the icons at the top is for easier access to other pages rather than going home to get to a different page.

*Error conditions:*

- If it is possible that an error occurs because of the user's interaction (e.g., incorrect password), describe the errors and their outcomes (e.g., user is shown an error message)
